Create a Simple Adaptive Release Rule

The Basic Adaptive Release rule allows the Instructor to add and edit one rule for a single piece of content. This single rule may have multiple criteria. For example, the rule may require the user to meet both date criteria and review status criteria before the content is available. Advanced Adaptive Release rules can also be used to add multiple rules to a single piece of content.

Step 1  Make sure Edit Mode is ON.

Step 2  Open a Content Area from the Content Menu.

Step 3  Select Adaptive Release on the contextual menu for the item.

Step 4  Complete one or more sections of the Adaptive Release page: Date, Membership, Grade, Review Status.

Date: Use the Display After and Display Until date and time fields to limit availability of the content. Select the Display After and Display Until check boxes in order to enable the date and time selections. Display restrictions do not affect the content, only the appearance of the content.

Membership: Select the user(s) or group(s) that you want to release the content to.

Grade: Select the Grade Center column and the corresponding conditions.
| Step 5 | Click **Submit**. |

Click **Review Status** to add this type of criteria to the Adaptive Release Rule. Select the content item for Review.
